(Which, while not the first, was the first to come with standard software installation, meaning the user didn't need to do anything special to install.) Autodesk initially planned to use the first IBM PC, known as the PC 5150, for its CAD program; however, the first PC was significantly more expensive and lacked a floppy disk drive, and was thus not practical for the market at that time. Autodesk finally released a floppy version of AutoCAD Crack Mac in May 1983, with a diskette of tools and basic drawing functionality, and a price tag of \$1,495. AutoCAD Cracked Accounts was the only major CAD program at the time that ran on a single diskette. By 1985, Autodesk had also announced that a second PC, the
